

112th Avenue SE to I-90 Interchange

Project Boundaries

The 112th Avenue SE to I-90 interchange improvements will be constructed with the Bellevue Nickel Improvement Project proposed to break ground in 2007.

Project Description

- WSDOT proposes to widen I-405 within the City of Bellevue between 112th Avenue SE and the I-90 interchange. The principle features of this project are:
 - Construct a northbound auxiliary lane between 112th Avenue SE and the I-90 interchange,
 - Construct a new 3-lane southbound bridge over I-90, to west of and adjacent to, the existing southbound bridge,
 - Convert the existing I-405 southbound structure over I-90 to a northbound HOV lane,
 - Construct stormwater management facilities, and
 - Construct a ramp meter at 112th Avenue SE northbound I-405 on-ramp.

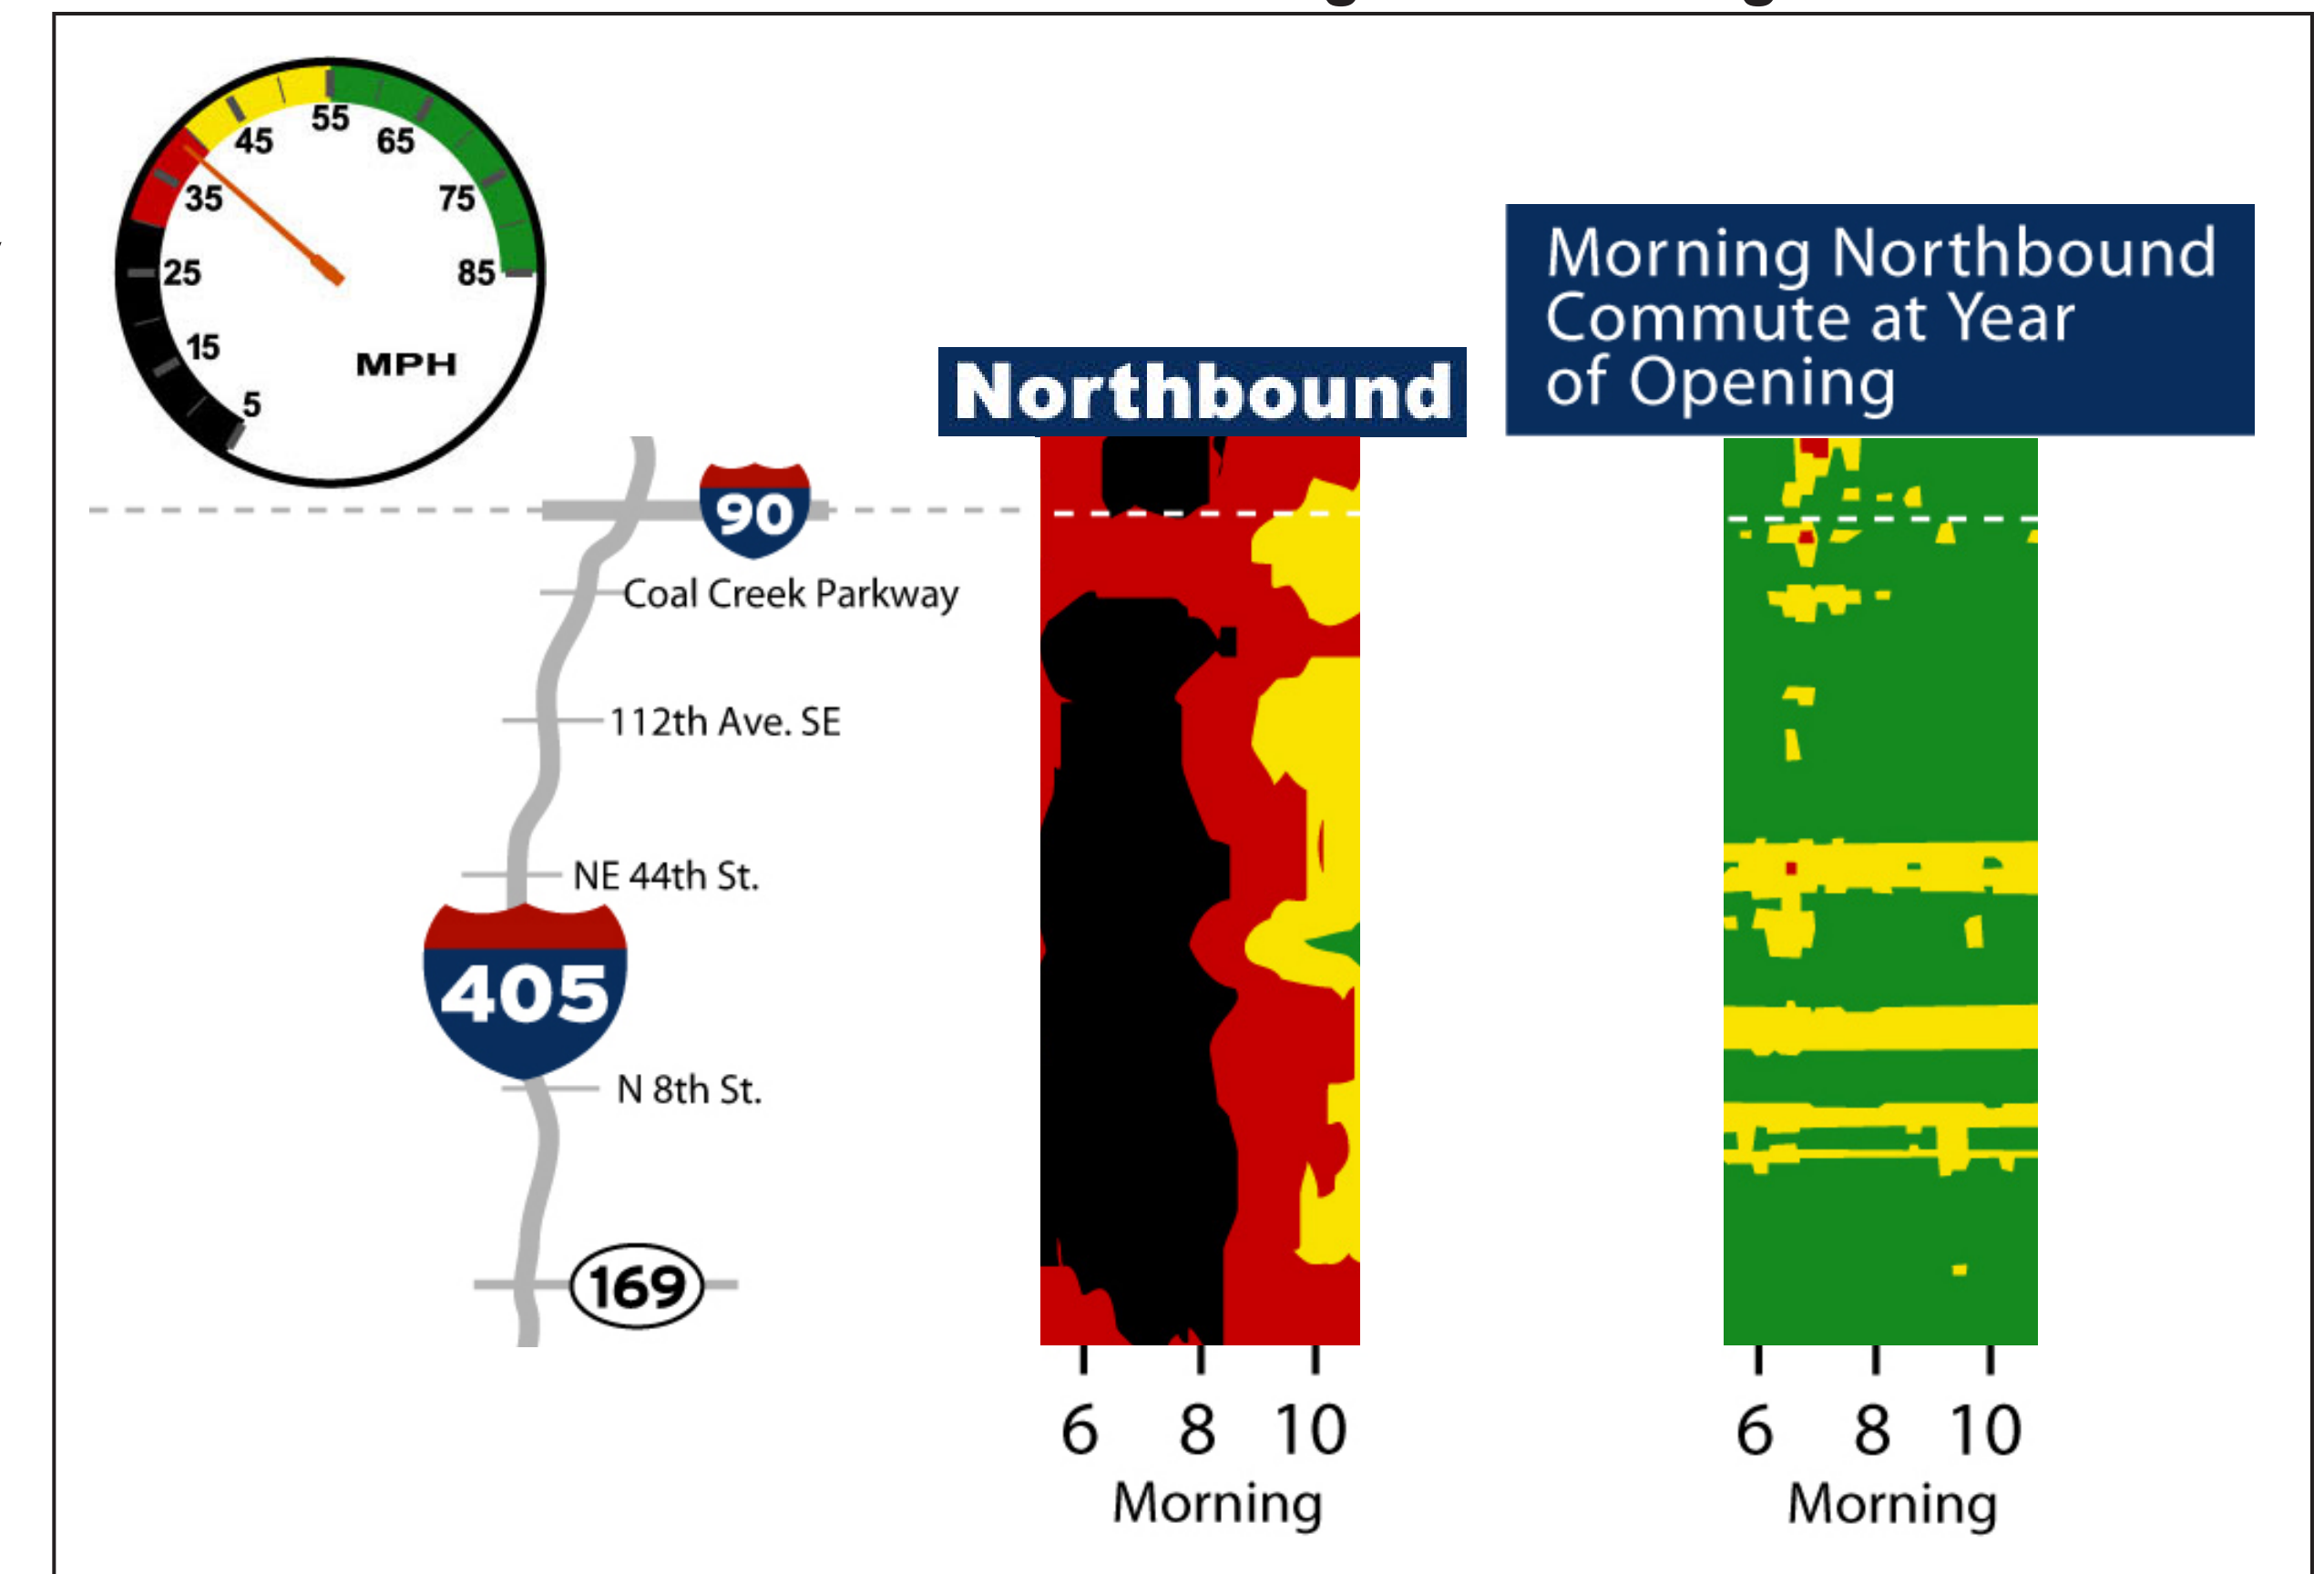

Project Benefits

- The 112th Avenue SE to I-90 improvements will increase speeds up to 25 mph during peak periods.

Project Time line

- Construction of the 112th Avenue SE to I-90 interchange improvements will be combined with the Bellevue Nickel Improvement Project that will begin in spring 2007 and be complete by the end of 2009.

Morning Traffic Congestion Forecast

This graphic illustrates weekday traffic congestion on I-405. The colors show the traffic speeds at a given time and at a specific location along the I-405 corridor. The right-hand side of the graphic shows the morning northbound commute after freeway improvements in 2009.
